

Attachment C: Feedback form

Albert Eden Local Board feedback on pest management approaches proposed for the Regional Pest Management Plan.

Issue	Proposed Approach	Supports Y/N	Comment
Cats	<p>To continue management of cats in areas of high biodiversity value as part of integrated pest control but potentially for an increased number of sites.</p> <p>To provide greater certainty cats will be defined as pests in these circumstances if they are not able to be identified by microchip or other means as being owned.</p> <p>Cats will continue to be controlled on areas of public land where threatened species are being protected (regardless of whether they are owned or unowned). Example sites: the open sanctuaries and kokako/kiwi management area in the Hunua Ranges.</p>		
Possums	<p>Landscape scale progressive containment programme to manage possums. Rural management would be integrated with management in high value biodiversity areas. This could be achieved using a targeted rate across rural Auckland.</p>		
Widespread pest plants	<p>Site-led programme for parks with significant ecological areas to manage a suite of up to 30 pest plants per site to an extent that protects the values of the parkland. Includes use of rules in buffer areas around parkland.</p>		

Issue	Proposed Approach	Supports Y/N	Comment
New ban of sale	Phasing out the sale of approximately 50 new plant pests and 13 new animal pests in addition to those currently identified.		
Pigeons	Education and advice. Staff can provide education and advice on managing nuisance impacts.		
Weeds on Council land	Site-led programme for parks with significant ecological areas to manage a suite of up to 30 pest plants to an extent that protects the values of the parkland.		
Rabbits	Current approach, plus addition of good neighbour rule requiring landowner control on complaints basis to reduce impacts on neighbouring properties.		
More education around pests	Provision of information and advice on pest identification, impacts and control, and increased communications around pathway management for a suite of species.
