

There were 18 submissions received by the closing date. The questionnaire/flyer asked people to rank their preferences for the design options. A summary of the feedback is shown in the graph below.

It was clear from the feedback received that the painted artistic flora image was more preferred than the stone and timber look.

The most preferred design was Option B (Artistic painted native flora exterior with timber shingle roof). The next preferred option was Option A (Artistic painted native flora exterior with mono-slope roof).

There were a further 8 submissions that were received after the closing date and therefore not included in graph below. The majority of these submissions also supported Option B as the most preferred design.

A summary of the comments received is included below (also includes late submissions):

| |
|---|
| Keep it quirky its Titirangi |
| Option A is the most unobtrusive and I personally think it is the most attractive, and I think it's important to support local artists with public commissions |
| It's so visible and public and by food outlets it needs to as discrete as possible and must be well maintained so smell is not carried |
| Monoslope roof allows the roots of the rimu tree to remain absorbing water. Concern with the rimu tree. It won't stand any root disturbance or reduction of its water supply (rain) |
| A & B detract from natural beauty of trees etc. far better to take a more natural approach to the design could it be more integrated into the landscaped island. Feels a little tacked on at the moment |
| The word toilet should be clearly displayed on all of the structures, whichever one is chosen |
| Option B is an excellent design - well thought out and sympathetic to the village environment. Option C & D are awful |
| Thank you for doing it |
| Needs to blend in with surroundings |
| As it is moving to such a prevalent position, seen as you enter the village, the only appropriate one is Option B - discreet and in keeping with aesthetic of Village |
| Option B blends better, Option C & D looks like a hunting hyde. Please consider an automatic cleaning low smelly option. |
| really like the discrete slope roof |
| Option B blends in well with bus stop design, looks all part of same piece |
| The roof line for Option B fits in well with bus shelter making it not such an eye sore |
| Combine Option D with painted native flora exterior and stone back and sides. Replace old toilet block with like facility. Your photo shows sufficient room to accommodate three cubicles at least one of which should have mobility access. For at least the last 40 years the existing public toilet block has been open 24/7. Therefore its replacement should not be lockable except from the inside, but always open for the convenience of the general public. |
| <p>I am opposed to the development in this location for the following reasons:</p> <ul style="list-style-type: none"> • It will detract from their business as it is in close proximity • It will detract from the entrance into Titirangi • It will have a negative effect on the pedestrian space • It will have a negative effect on the rimu Tree <p>Wherever the toilet ends up, it should follow other roadside structures in the village such as the bus stop and seating beside the pedestrian crossing where there are gabled/hip roofs (with shingle like appearance) and plenty of basalt bluestone walls.</p> |
